

Helm installed Trident 21.07.2 upgrade has pods failing with certificate errors

https://kb-stage.netapp.com/cloud/Astra/Trident/Helm_installed_Trident_21.07.2_upgrade_has_pods_f...

Updated: Wed, 24 Jun 2026 07:24:33 GMT

Applies to

Trident 21.04.01 and higher

Issue

The initial error, when running a Helm upgrade on an existing Trident deployment, from the trident operator is a client/server version mismatch.

After deleting the trident pods to restart them, they came back with:

```
http: TLS handshake error from IP_ADDR:SRC_PORT: remote error: tls: bad certificate
```
