Applies to

ActiveIQ Unified Manager 9.6+

Answer

Is not possible to get a historical graph that shows snapshot growth over time.

Instead it is possible to set up [Scheduled reports](#) that will contain Snapshot utilization. These reports on the long Run will provide an accurate way to see granular snapshot growth over time.

These can be created from the **Storage>Volumes>Capacity:All Volumes** view.

Note: If more [customization](#) is needed on the report , the **Show/Hide** feature can be used.

Additional Information

Other features can be also useful:

1. **Snapshot Growth Daily** average:

Seen under **Storage>Volume Health View> Other Details**

This will Displays the change (in percentage, or in KB, MB, GB, and so on) that occurs every 24 hours in the Snapshot copies in the selected volume.

2. Event generation for Snapshot reserve:

These events can be used to set up [Alerts](#).
