

How to define SnapMirror baseline Snapshot

https://kb-stage.netapp.com/on-prem/ontap/DP/SnapMirror/SnapMirror-KBs/How_to_define_SnapMirro...

Updated: Wed, 22 Apr 2026 02:10:21 GMT

Applies to

- ONTAP 9.x
- SnapMirror
- SnapShot

Description

- A SnapMirror "baseline snapshot" denotes the first snapshot created when a snapmirror relationship is initialized.
- Two updates subsequent to initialization, the original baseline snapshot rolls off and is replaced by a new snapmirror snapshot.
- The original baseline snapshot created during initialize does not persist throughout the lifetime of a

SnapMirror relationship, and is replaced by a new SnapMirror snapshot capturing the delta changes since the baseline snapshot.

- The new snapmirror snapshot is replicated to the destination, and the source snapshot and destination snapshot are known as in-common snapshots.
