Updated: Wed, 24 Jun 2026 07:24:36 GMT

Issue

- You can use OnCommand System Manager (OSM) to login with "domain\user" on a cluster that is not enabled for Security Assertion Markup Language (SAML).
- After you enable SAML authentication, the system adds an additional entry as the SAML authentication for the "domain\user" but the "domain\user" cannot log in to the cluster by using OSM.
