Applies to

ActiveIQ Unified Manager 9.7 and later

Description

Starting with Unified Manager 9.7, there are two methods of creating backups of the Unified Manager database and configuration files, and their associated schedules.

- **Regular Back-up Job** - Gets triggered at the Regular Backup Schedule; same as older versions of UM (Unified Manager)
After the first full backup, all the subsequent backups are incremental without any limits to the number of incremental files.

- **Full Back-up Job** - Gets triggered at the Full Backup Schedule
