

What is the expected healthy condition in Snapmirrored and InSync SnapMirror relationship?

https://kb-stage.netapp.com/on-prem/ontap/DP/SnapMirror/SnapMirror-KBs/What_is_the_expected_he...

Updated: Wed, 24 Jun 2026 07:24:34 GMT

Applies to

- ONTAP 9
- SnapMirror relationships with the following policy types:
 - `sync-mirror`
 - `strict-sync-mirror`
 - `automated-failover`
 - `automated-failover-duplex`

Answer

Since `Snapmirrored` and `InSync` status means the relationship is synchronized and no transfer operation is

in progress, `Healthy` parameter in `snapmirror show` command is expected to be `true`.

Note: This does not mean the combination of `Relationship Status = InSync` and `Healthy = false` is never happened.
