

How to verify the event conditions match the alert in Active IQ Unified Manager

https://kb-stage.netapp.com/Legacy/OnCommand_Suite/How_to_verify_the_event_conditions_match_t...

Updated: Wed, 24 Jun 2026 06:32:05 GMT

Applies to

- Active IQ Unified Manager 9.x +
- OnCommand Unified Manager 6.x +

Description

Active IQ Unified Manager alerts are triggered when an event is generated within the application that matches all of the criteria defined in the alert configuration.

Clicking on an event's name in the Events view will navigate to the event's summary page. Verify that the event conditions match the expected alert criteria by referencing the "Alert Settings" field on the event summary page. If the event matches an alert, the name of the alert will be presented as a hyperlink.
