

Implicit name mapping fails and all Windows users are mapped to 'pcuser'

https://kb-stage.netapp.com/on-prem/ontap/da/NAS/NAS-KBs/Implicit_name_mapping_fails_and_all_...

Updated: Wed, 24 Jun 2026 06:32:15 GMT

Applies to

- ONTAP 9
- Multiprotocol name mapping

Issue

- When a CIFS user creates a file on a UNIX security style volume, the owner of the file is `pcuser` or UID 65534
- When running `access-check authentication show-creds`, ONTAP reports that the Windows user maps to 'pcuser' instead of an intended UNIX user of the same name as the Windows user
