

## SnapCenter duplicate backup job failure - decommissioned host is not registered

[https://kb-stage.netapp.com/data-mgmt/SnapCenter/SC\\_KBs/SnapCenter\\_duplicate\\_backup\\_job\\_failur...](https://kb-stage.netapp.com/data-mgmt/SnapCenter/SC_KBs/SnapCenter_duplicate_backup_job_failur...)

Updated: Wed, 24 Jun 2026 06:32:11 GMT

### Applies to

- SnapCenter Server (SC)
- SnapCenter Plugin for Windows (SCW)
- SnapCenter Plugin for Exchange (SCE)
- SnapCenter Plugin for SQL (SCSQL)

### Issue

- After removing a Windows Server host from being managed by SnapCenter, a duplicate backup job is being triggered for the resource group which is failing with error, "Exception when creating request for host: Host <decommissioned\_host> is not registered with SnapCenter".

- Modifying the resource group to run at a different time does not impact the time that the duplicate job is triggered.
